A Digital Agenda for Europe

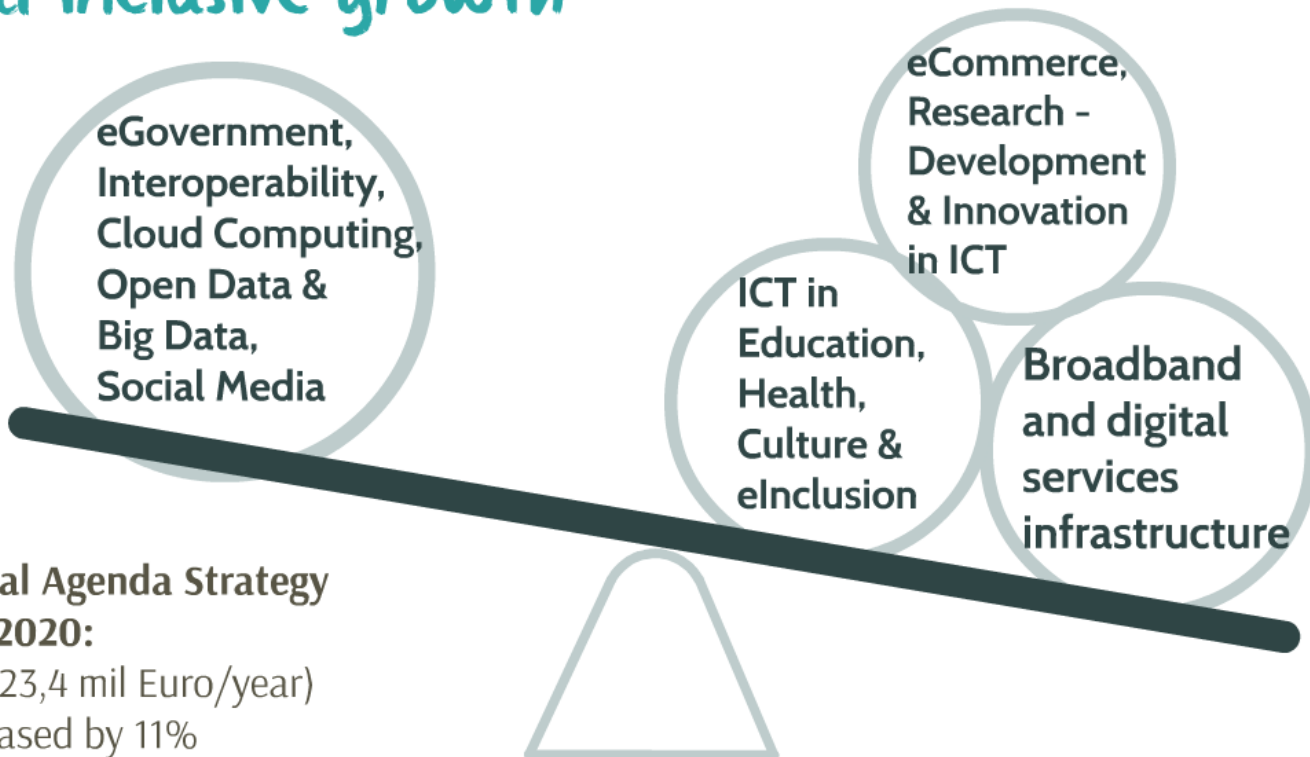

The Digital Agenda for Europe 2020, European Commission

- takes full advantage of the potential of information and communication technologies (ICT)
- promotes innovation, economic growth and progress
- offers to European citizens access to all the benefits of the digital society

Digital priorities, Europe 2020

- Digital Single Market
- Interoperability and Standards
- Trust and Security
- Fast and Ultra-fast Internet Access
- Research and Innovation
- Digital literacy, skills and eInclusion
- ICT-enabled benefits for EU society

Romania, in the European context of intelligent, sustainable and inclusive growth

National impact of Digital Agenda Strategy implementation, 2014 - 2020:

- GDP growth by 13% (23,4 mil Euro/year)
- Number of jobs increased by 11%
- Administration costs reduced by 12% (26,6 mil Euro/year)

3,9 bil. Euro, need of investment

Innovation, Research & Development in ICT

Investing in creative industries

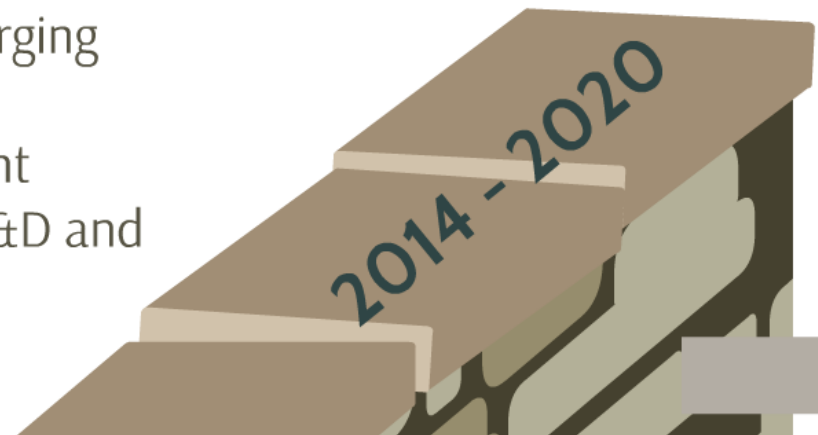

- they have a bigger, growing economic potential than the rest of the economy
- they deliver 5% of national GDP
- they represent 10% of national work force

source: shutterstock

Digital Agenda for Romania will:

- develop a infrastructure to sustain creative industry promote & sustain the development of innovative business clusters
- create a specific economic context for emerging competitiveness hubs
- support regional infrastructure development
- participate in European partnerships for R&D and innovation.

Government direct interventions

- identify & evaluate the development stage of IT clusters in Romania
- sketch their economical performances & innovation level
- inventory of associated companies within each cluster
- evaluate clusters' IT based solutions
- create a Digital Map of innovative IT projects identified in every cluster
- analyze & prioritize the need for IT solutions for 10 priority sectors from Romania's National Strategy for Competitiveness

Vulnerabilities

citizens with low level of digital literacy

reduced use of ICT for companies & society in general

Economic sectors with potential for smart specialization

National Strategy for Competitiveness, 2014

Important economical impact

Tourism & eco tourism
Textiles
Furniture & wood
Creative industries

Competitive dynamics

Auto industry & components
Information & communications
technology (ICT)
Food & beverage

Innovation, technological development & added value

Health & pharmaceuticals
Energy & environment management
Bioeconomics, Biopharmaceutics & Biotechnology

Open and Participative Innovation

- **Businesses** will get scalable solutions, faster & richer innovation cycles.
 - **Citizens** will get personalized, better, optimized & affordable solutions.
 - **Service providers** will find new approaches in service provision & affordable service creation.

Internet Users: the New Innovators

- are services' consumers
- are better prepared technically & intellectually
- are constant users of advanced technologies
- know the public's needs
- know the deficiencies & limits of the system.

National ecosystem of innovation and competitiveness

Excellence clusters, RO 2014

Tripartite partnerships

↓
Innovative ICT products & services

ICT in Education and Digital Literacy

ICT use in Romania, 2012:

EC, Digital Agenda Scoreboard, 2014

73% of schools (I - XII) have a website

84% of vocational schools have a website

63% of universities have eLearning platforms

1,6% of adults (16-54 years) are following educational & training programs

WWW

Romania's Interventions, 2014 - 2020:

- ICT infrastructure for primary & secondary pupils
- eCatalogue & digital books at national level
- software for educational use
- the "National Learning Platform" & the National Digital Library
- wifi access to every school & campus
- digital skills for teachers & students
- OER and Web 2.0 in the teaching-learning process
- Life-Long-Learning using intelligent ICT
- extra-curricular activities with the use of ICT.

ICT in Culture.

Preserving cultural patrimony digitally.

1. Europeana.eu

- Network of european patrimony repositories: over 2300 contributors of digital content
- Virtual data bank: 31.5 mil digital objects (19 mil images, 12 mil texts, 0.5 mil audio, 0.2 mil video and 15 000 3D objects)

Romania's contribution, aug. 2014 : 61.404 digital items.
Target for 2015: 750.000 digital items.

2. Romania's intervention for every library, 2014 - 2020:

- transforming libraries in knowledge shelters for: farmers, entrepreneurs, disadvantaged people, local leaders, teachers & pupils
- delivering new services, locally tailored

ehealth and Telmedicine in Romania

ICT assisted medicine means:

- health care services that are currently unavailable (delivered in specialized polyclinics)
- screening programs with high quality control
- high quality of life for elders
- social inclusion for remote citizens.

National interventions, 2014 - 2020:

- assuring interoperability for existing medical information systems
- telemedicine, through:
 - specialized medical services after-hospitalization, ambulatory
 - access to specialized ambulatory services for rural population.

eInclusion

Romania's intervention, 2014 - 2020:

Spreading local **Public Points of Access to Information** throughout disadvantaged communities, as shelters for:

- integrated community knowledge
- accessing multiple information
- developing, implementing & monitoring new projects
- delivering new, community-based services.

Best practice, at the root of Digital Agenda for Romania: Knowledge based Economy Programme.

Beneficiaries are determined by:

- disadvantaged geographical location
- weak economical conditions
- low or zero ICT infrastructure and Internet access
- low or zero digital skills.

We take care of every citizen :)

"eGovernment is growing towards weGovernment!"

This new generation of eGov services stands as the best opportunity for Europe for creating a more sustainable public sector socially, economically and ecologically."

(Neelie Kroes, Commissioner for Digital Agenda for Europe 2020, EC Vice-president)

Losing a job
Retirement
Work accidents & incapacity

It is possible to live online?

Smart City – the digital technologies translate into better public services for citizens, more efficient use of ICT resources and a lower impact on the environment.

Yes! the Romanian Digital Agenda supports smart living.

Environment: using ICT for building a sustainable economy with lower CO2 emissions

Health: a more efficient European health system using ICT

Public services: ICT should deliver electronic public services to citizens and business environment

Trust and Safety: ICT should combat world-wide social exclusion, fraud and abuse issues.

Thank you!

Start living smart. Join and contribute to the Romanian Digital Agenda implementation.
